1962 Index to Feature Articles

Volumes 55 & 56, Jan-Dec 1962

Feature Articles, Manuals, Special Reports, File Facts and the most important What's New in Materials articles.

ALUMINUM AND ITS ALLOYS

Aluminum joining process, New—Mar, p 9
APM alloys, Standards set for—Nov, p 19
Black emissivity coating, New—Aug, p 110
Clad aluminum, A new—June, p 15
Cryogenic tank car—Apr, p 128
Flexible printed circuits—Oct, p 109
Heat sealer for bread wrappers—Apr, p 142
'Impossible' forgings—May, p 10
Insulating a space chamber—Mar, p 124
Nontarnishing reflectors—May, p 9
Seven layers make fast, steady skis—Jan, p 89
Solid-appearing truss beam—Apr, p 140
Super insulations, Two new—May, p 101
Wear resistant materials and coatings—Nov, p 131

BERYLLIUM

Beryllides for lightweight, high temperature structures—Feb, p 84
Beryllium copper powder, First—Aug, p 17
Beryllium extrusion, Longest—Mar, p 11
Beryllium wire, Whisker-thin—Mar, p 10

CARBON, GRAPHITE

Carbon and graphite, The new world of—Sept, p 113
High temperature furnace—Apr, p 137
Materials for heat exchangers, Selecting—Mar, p 125
Missile ground support cable—Apr, p 143
Pyrolytic materials, New—Aug, p 106
Wear resistant materials and coatings—Nov, p 131

CASTINGS

Casting process boosts strength, quality—Dec, p 17
Fracturable striker plate—Apr, p 138
Investment casting costs, Cut—Nov, p 119
Investment castings, Cheaper—June, p 9
Iron bars now continuously cast—Sept, p 15
Predicted tolerances for investment castings—July, p 115
Steel castings, Stronger, tougher—Sept, p 93
Two ways to better dies: premium castings, densified tool steels—Apr, p 12

CERAMICS, GLASS

Bearing materials and lubricants for high temperatures—Mar, p 109
Ceramic, cermet and refractory coatings—Aug, p 123
Materials for heat exchangers, Selecting—Mar, p 125
Microminiature transistor package—Apr, p 122
Precision film resistor—Apr, p 136
Refractory fibers for ablation, thermal insulation, New—Oct, p 13
Stronger sheet that costs less—June, p 10
Stronger, tougher glass—Nov, p 10
Thirsty glass—Dec, p 118
Wear resistant materials and coatings—Nov, p 131

COATINGS, FINISHES

Anodizing affects properties of magnesium, How—Oct, p 116
Black emissivity coating, New—Aug, p 110
Ceramic, cermet and refractory coatings—Aug, p 123
Coating large refractory metal parts—Dec, p 120
Electroplated coatings, Guide to—Feb, p 95
Heat sink for rectifier—Apr, p 149
Low cost coatings for metals, New—Jan, p 86
Nickel plated inside 24-ft pipe—Oct, p 9
Plasma arc coatings—June, p 109
Plasma coating, Faster—Nov, p 16
Plated cermet coatings fight heat, wear—Sept, p 105
Plated plastic parts—Nov, p 122
Primer to boost acetal uses—July, p 9
Protection for magnesium, New—July p 90
Rinse additive dispenser—Apr, p 141
Silicone coating for metals, Clear—Sept, p 11
Surface treatment for acetal parts—Feb, p 10
Vinyl-coated steel—Apr, p 17
Wear resistant materials and coatings—Nov, p 131

COMPOSITES (not classified elsewhere)

Chromium composites are ductile—**Dec, p 115**
Heat treatable, machinable carbides—Oct, p 114
Plated cermet coatings fight heat, wear—Sept, p 105
Thermosetting acrylic for reinforced plastics, New—Aug, p 10

COPPER AND ITS ALLOYS

Current-carrying springs, Stronger—July, p 12
Flexible printed circuits—Oct, p 109
Heat sink for rectifier—Apr, p 149
Metal composites for electrical contacts, **Better—Feb, p 15**
Radiation and heat affect permanent magnet materials, How—Jan, p 90
Standard classification for wrought copper and copper alloys—Feb, **p 111**
Vacuum held in arc chamber—Mar, p 17
Wear resistant materials and coatings—Nov, p 131
Wrought copper alloys—a primer—Nov, p 115

CORROSION RESISTANT PROPERTIES AND MATERIALS (see also stainless steel)

Corrosion in the home—Mar, p 120
Protection for magnesium, New—July, p 90
Rinse additive dispenser—Apr, p 141
Stainless steel, Stronger type 410—Oct, p 17

ELECTRICAL AND ELECTRONIC PROPERTIES, MATERIALS

Arc chute for loadbreak cutout—Apr, p 130
Carbon and graphite, The new world of—Sept, p 113
Circuit board for hearing aid—Apr, p 134
Current-carrying springs, Stronger—July, p 12
Electronic materials, Engineer's guide to—June, p 121
Electronic parts made by chemical milling, Intricate—Nov, p 120
Flexible printed circuits—Oct, p 109
Laminated plastics tube and rod—Dec, p 110
Laminates for heat resistance, Electrical insulation—Apr, p 10
Low dielectric for 550 F—July, p 10
Metal composites for electrical contacts, **Better—Feb, p 15**
Microminiature transistor package—Apr, p 122
Permanent magnet materials, New—Jan, p 17
Precision film resistor—Apr, p 136
Radiation and heat affect permanent magnet materials, How—Jan, p 90
Semi-metal bonds thermoelectric parts—Jan, p 9
Soft magnetic materials for 930 F plus—May, p 113
Thermoelectric cooler, First—May, p 13
Thermoelectric Materials today—Jan, p 79

EXTRUSIONS

Aluminum extrusions, Five winning—Jan, p 14
Extruded shapes of reinforced plastics—Sept, p 12
Rubber parts, How to design and specify—Jan, p 95

FABRICS, FIBERS, FELTS

Nylon fiber for 500 F—Feb, p 12
Synthetic fiber pad felts—Jan, p 129, Mar, p 151

FORGINGS

Forging method improves metal flow, New—Dec, p 9
'Impossible' forgings—May, p 10
Tungsten and molybdenum sheets, Large—Apr, p 155

FORMING

Complex shapes formed in heavy plate—Oct, p 14
Magnetic force shapes metals—Feb, p 9
Rubber parts, How to design and specify—Jan, p 95

GENERAL

Automatic water softener—Apr, p 151
Design for minimum weight—Jan, p 83
How materials behave in space—Sept, p 97
Metals vs plastics—Mar, p 131
System to store and retrieve materials data—Nov, p 126
Thermocouple sensing tip—Apr, p 147
Value engineering, Four approaches to—Dec, p 97

HEAT TREATMENT

Flame hardening—June, p 11
Largest heat treating furnace—Jan, p 13
Lighter, lower cost beam, A—July, p 92
Process case hardens molybdenum, New—Sept, p 9
Spin/hard for uniform surface hardening—Jan, p 12
Wear resistant materials and coatings—Nov, p 131

HIGH TEMPERATURE PROPERTIES AND MATERIALS

Bearing materials and lubricants for high temperatures—Mar, p 109
Beryllides for lightweight, high temperature structures—Feb, p 84
Black emissivity coating, New—Aug, p 110
Carbon and graphite, The new world of—Sept, p 113
Casting process boosts strength, quality—Dec, p 17
Ceramic, cermet and refractory coatings—Aug, p 123
Coating large refractory metal parts—Dec, p 120
Electromechanical actuator for 1200 F—Apr, p 126
Heat resistance of thermoplastics, How to interpret—May, p 116
High temperature furnace—Apr, p 137
Joints in refractory metals, Better—Aug, p 9
Laminates for heat resistance, Electrical insulation—Apr, p 10
Materials for heat exchangers, Selecting—Mar, p 125
Nickel beats superalloys above 2000 F, Strong, new—Aug, p 12
Plasma arc coatings—June, p 109
Plated cermet coatings fight heat, wear—Sept, p 105

1962 Index *(continued)*

Process case hardens molybdenum, New—Sept, p 9
Pyrolytic materials, New—Aug, p 106
Refractory fibers for ablation, thermal insulation, New—Oct, p 13
Refractory metals roundup—Oct, p 131
Stainless with better hot hardness, New—Nov, p 14
Superalloy ups design limits 50°F—Nov, p 9
Thermal tests for plastics—Mar, p 116
Tungsten and molybdenum sheets, Large—Apr, p 155

IRONS

Bearing materials and lubricants for high temperatures—Mar, p 109
Fracturable striker plate—Apr, p 138
Iron bars now continuously cast—Sept, p 15
Malleable iron, A tough, wear resistant—Oct, p 10
Radiation and heat affect permanent magnet materials, How—Jan, p 90
Soft magnetic materials for 930 F plus—May, p 113
Wear resistant materials and coatings—Nov, p 131

JOINING AND FASTENING

Adhesives for wood—July, p 96
Aluminum joining process, New—Mar, p 9
Best brazing wire diameter, Find—Oct, p 124
Gas pressure bonding—Mar, p 14
How to attach acrylic moldings—June, p 103
Joining dissimilar metals—Aug, p 115
Joints in refractory metals, Better—Aug, p 9
Semi-metal bonds thermoelectric parts—Jan, p 9
Welding in a vacuum?—May, p 12
Welding metals by friction—Feb, p 79

MACHINING, METAL REMOVAL

Electronic parts made by chemical milling, Intricate—Nov, p 120
Heat treatable, machinable carbides—Oct, p 114
New ways to remove metal, Three—Aug, p 93
Shaping complex parts—May, p 112
Two ways to better dies: premium castings, densified tool steels—Apr, p 12

MAGNESIUM AND ITS ALLOYS

Anodizing affects properties of magnesium, How—Oct, p 116
Damping of light metals—Aug, p 104
Magnesium alloy is 25% lighter, New—Nov, p 12
Protection for magnesium, New—July, p 90
Wear resistant materials and coatings—Nov, p 131

MOLYBDENUM AND ITS ALLOYS

Process case hardens molybdenum, New—Sept, p 9
Refractory metals roundup—Oct, p 131

NICKEL AND ITS ALLOYS

Bearing materials and lubricants for high temperatures—Mar, p 109
Materials for heat exchangers, Selecting—Mar, p 125
Nickel beats superalloys above 2000 F, Strong, new—Aug, p 12
Nickel plated inside 24-ft pipe—Oct, p 9
Nickel strip with tailored properties, Using—Apr, p 160
Nitinols are nonmagnetic, corrosion resistant, hardenable—Feb, p 82
Stronger sheet that costs less—June, p 10
Superalloy ups design limits 50°F—Nov, p 9
Wear resistant materials and coatings—Nov, p 131

NONFERROUS METALS (not classified elsewhere)

Beryllides for lightweight, high temperature structures—Feb, p 84
Boron fibers for stronger composites—Oct, p 11
Chromium composites are ductile—Dec, p 115
Lead strip for structural uses—Apr, p 158
Metal composites for electrical contacts, Better—Feb, p 15
Metal shot to add weight, Use—Mar, p 115
Nitinols are nonmagnetic, corrosion resistant, hardenable—Feb, p 82
Nomograph: thermal conductivity at any temperature—Feb, p 90
Permanent magnet materials, New—Jan, p 17
Soft magnetic materials for 930 F plus—May, p 113
Thermoelectric cooler, First—May, p 13
Thermoelectric materials today—Jan, p 79
What's ahead for lead and zinc—July, p 94

NONMETALLICS (not classified elsewhere)

Adhesives for wood—July, p 96
Insulating a space chamber—Mar, p 124
Pyrolytic materials, New—Aug, p 106
Refractory fibers for ablation, thermal insulation, New—Oct, p 13

NUCLEAR PROPERTIES AND MATERIALS

Carbon and graphite, The new world of—Sept, p 113

PAPER

Cryogenic tank car—Apr, p 128

PLASTICS—REINFORCED

Antenna is glass wound, Tough—Aug, p 14
Composite missile air vanes—Apr, p 124
Design tips for reinforced plastics parts—Oct, p 122
Extruded shapes of reinforced plastics—Sept, p 12
Ladder for electrical workers—Apr, p 150
Laminates for heat resistance, electrical insulation—Apr, p 10
Low dielectric for 550 F—Jul, p 10
Prepregs cut cost of new fighter, 150—Apr, p 14
Reinforced plastics for high production—Oct, p 118
Reinforced plastics get stronger—Aug, p 99
Thermosetting acrylic for reinforced plastics, New—Aug, p 10

PLASTICS—THERMOPLASTICS

ABS plastics, Take another look at—Sept, p 108
A new family of thermoplastics—May, p 17
Arc chute for loadbreak cutout—Apr, p 130
'Costly' plastic cuts radio price—July p 14
Flexible printed circuits—Oct, p 109
Heat resistance of thermoplastics, How to interpret—May, p 116
How to attach acrylic moldings—June, p 103
Laminated plastics tube and rod—Dec, p 110
Missile ground support cable—Apr, p 143
Nylon fiber for 500 F—Feb, p 12
Plastic is rigid, ductile, New—Dec, p 12
Pressure gages, Two—Apr, p 145
Primer to boost acetal uses—July, p 9
Redesigning appliance part with plastic—Mar, p 128
Rinse additive dispenser—Apr, p 141
Seven layers make fast, steady skis—Jan, p 89
Slide and opaque projector—Apr, p 132
Super insulations, Two new—May, p 101
Surface treatment for acetal parts—Feb, p 10
Thermal tests for plastics—Mar, p 116
Tough plastic can now be molded—Jan, p 10
Wear resistant materials and coatings—Nov, p 131

PLASTICS—THERMOSETS

Air conditioner wing panel—Apr, p 148
Antenna is glass wound, Tough—Aug, p 14
Circuit board for hearing aid—Apr, p 134
Dimensional stability of thermosetting plastics—Feb, p 88
Flexible printed circuits—Oct, p 109
Fluorescent light ballast—Apr, p 144
Heat sealer for bread wrappers—Apr, p 142
Ladder for electrical workers—Apr, p 150
Laminated plastics tube and rod—Dec, p 110
Laminates for heat resistance, electrical insulation—Apr, p 10
Phenolics meet tight specs for computers—Feb, p 92
Plated plastic parts—Nov, p 122
Polyurethane boosts tank car capacity—Nov, p 13
Polyurethane—now in sheet form—Dec, p 10
Prepregs cut cost of new fighter, 150—Apr, p 14
Thermal tests for plastics—Mar, p 116
Thermosetting acrylic for reinforced plastics, New—Aug, p 10
Thermosetting molding compounds, Engineer's guide to—July, p 101
Wear resistant materials and coatings—Nov, p 131

POWDER METALLURGY

APM alloys, Standards set for—Nov, p 19
Beryllium copper powder, First—Aug, p 17
Damping of light metals—Aug, p 104
Lead strip for structural uses—Apr, p 158
Nickel strip with tailored properties, Using—Apr, p 160
Powder metallurgy specifications—May, p 145
Stronger sheet that costs less—June p 10
Tungsten and molybdenum sheets, Large—Apr, p 155
Wear resistant materials and coatings—Nov, p 131

PRECIOUS METALS

Precision film resistor—Apr, p 136
Radiation and heat affect permanent magnet materials, How—Jan, p 90
Wear resistant materials and coatings—Nov, p 131

RUBBER

Carbon black improves elastomers, New—Aug, p 15
Missile ground support cable—Apr, p 143
Polyurethane—Now in sheet form—Dec, p 10
Rubber parts, How to design and specify—Jan, p 95
Synthetic elastomers, The new—July, p 83
Wear resistant materials and coatings—Nov, p 131

STAINLESS AND HEAT RESISTING STEELS

Clad aluminum, A new—June, p 15
'Impossible' forgings—May, p 10
Insulating a space chamber—Mar, p 124
Materials for heat exchangers, Selecting—Mar, p 125
Rinse additive dispenser—Apr, p 141
Stainless steel rolled ultra-thin for B-70 bomber skin—Feb, p 87
Stainless steel, Stronger type 410—Oct, p 17
Stainless with better hot hardness, New—Nov, p 14
Stronger sheet that costs less—June, p 10
Wear resistant materials and coatings—Nov, p 131

STEELS

Complex shapes formed in heavy plate—Oct, p 14
Composite tubing—June, p 116
Current-carrying springs, Stronger—July, p 12
Flame hardening—June, p 11
High strength steels, Five—Apr, p 9
Lighter, lower cost beam, A—July, p 92
Maraging steels, The—May, p 106

New concepts in steel, The—May, p 121
Nomograph: Thermal conductivity at any temperature—Feb, p 90
Put steel back in designs—Dec, p 107
Seven layers make fast, steady skis—Jan, p 89
Spin-hard for uniform surface hardening—Jan, p 12
Steel castings, Stronger, tougher—Sept, p 93
Steel for critical structures, Tough new—Nov, p 128
Striking design with everyday steels—May, p 138
Stronger carbon steels—June, p 99
Two ways to better dies: premium castings, densified tool steels—Apr, p 12
Vinyl-coated steel—Apr, p 17
Wear resistant materials and coatings—Nov, p 131

TESTING AND INSPECTION

Thermal tests for plastics—Mar, p 116

TITANIUM AND ITS ALLOYS

'Impossible' Forgings—May, p 10
Materials for heat exchangers, Selecting—Mar, p 125
Titanium alloys for -423 F, Two—July, p 17
Wear resistant materials and coatings—Nov, p 131

TUBING

Composite tubing—June, p 116

ZINC

Wear resistant materials and coatings—Nov, p 131
What's ahead for lead and zinc—July, p 94
Zinc strip for structural use—June, p 114
